

NORRONE LOYALTY PROGRAM – TESTING GUIDE

Live site: <https://norrone-rewards-better-auth-tenant.vercel.app>
API base URL (for the demo pages / your own integration): <https://aware-axolotl-152.eu-west-1.convex.site>

1. LOGINS

Staff / Admin login (use at /login for the org dashboard, or /admin/login for the platform admin panel):

Email: admin@mail.com
Password: Admin@123

This one account can access BOTH:

- The platform admin panel (list of every organization on the platform)
- The "Norrone Demo Co" organization's own dashboard (customers, points, tiers, wallet design, etc.)

There is no separate login for customers – customers never sign in anywhere. They only ever interact through their Apple/Google Wallet pass or the organization's own website/POS (via the API).

2. PAGES – WHAT EACH ONE IS FOR

Public pages (no login needed):

/login	Staff sign-in -> lands on the org dashboard
/admin/login	Platform-admin sign-in -> lands on /admin
/signup	Self-serve: creates a brand-new organization and makes you its owner
/forgot-password	Placeholder page only – password reset emails are not wired up yet
/wallet-demo	Try downloading an Apple Wallet pass or getting a Google Wallet link
/api-demo	Try every other API endpoint (create/view customer, record a purchase, enroll membership, check offers, redeem a coupon)

Org dashboard (after logging in at /login):

Overview	Top-level stats for the organization
Customers	List + detail page per customer (points, tier, wallet button, manual point/tier/reward/coupon grants)
Membership	Paid membership plans
Tiers	Loyalty tiers and their auto-grant conditions (e.g. "Gold at \$200 spend")
Points	Point-earning rules (e.g. "1 point per \$1 spent")
Rewards	Reward definitions
Coupons	Coupon types and issued instances
Shops	Shop locations under this organization
API Keys	Generate/revoke API keys for your own website/POS integration
Wallet Passes	Set the logo, colors, and name for Apple/Google Wallet passes, with a

Staff	live preview Add/manage who has dashboard access
-------	---

Platform admin panel (after logging in at /admin/login):

Organizations	Every organization on the platform
Org detail	Single organization's detail/edit/delete
Regions	Countries and currencies supported platform-wide

3. DEMO DATA ALREADY SET UP

=====

One organization exists to test against: "Norrone Demo Co", with two shops and three customers each.

Downtown shop ID: md7721wqfvqqt85qhmghkq41n8ecqgg

- cust-downtown-1 Ada Lovelace
- cust-downtown-2 Grace Hopper
- cust-downtown-3 Alan Turing (already in the "Gold" tier, has points)

Uptown shop ID: md72jxrkn785ewppd8y78vk7dh8eckbv

- cust-uptown-1 Ada Lovelace
- cust-uptown-2 Grace Hopper
- cust-uptown-3 Alan Turing (already in the "Gold" tier, has points)

API key for this organization (a "secret" key – works for every endpoint):

sk_yzh6YoGEV4jzP_cLlUrzdiss_2B0ctyeT

4. HOW TO TEST THE WALLET PASSES (/wallet-demo)

=====

This page downloads a real Apple Wallet pass, or gets a real "Add to Google Wallet" link, using only an API key – no login needed. This is exactly what an organization's own website would do to hand a customer their loyalty card.

Ready-to-click link (Alan Turing, Downtown, already has points and a Gold tier – good for a first test):

https://norrone-rewards-better-auth-tenant.vercel.app/wallet-demo?key=sk_yzh6YoGEV4jzP_cLlUrzdiss_2B0ctyeT&shop=md7721wqfvqqt85qhmghkq41n8ecqgg&customer=cust-downtown-3

Or open the plain page and fill in the three fields yourself:

<https://norrone-rewards-better-auth-tenant.vercel.app/wallet-demo>

API key:	sk_yzh6YoGEV4jzP_cLlUrzdiss_2B0ctyeT
Shop ID:	md7721wqfvqqt85qhmghkq41n8ecqgg (or the Uptown one above)
Customer ID:	cust-downtown-3 (use the "cust-..." value, not the long database ID)

Click "Download Apple Wallet pass" for a real .pkpass file, or "Get Google Wallet link" for a "Add to Google Wallet" button.

NOTE on Google Wallet: while our Google Wallet issuer account is still under rev

iew, only
Google accounts added as test accounts in the Google Wallet Business Console can successfully save a pass. If tapping "Add to Google Wallet" fails for someone, that's almost certainly why – their Google account needs to be added as a tester first.

5. HOW TO TEST THE REST OF THE API (/api-demo) =====

This page exercises every other endpoint: creating/fetching a customer, recording a purchase (which can trigger points and automatic tier upgrades), enrolling a membership, checking offers, and redeeming a coupon.

Ready-to-click link (pre-filled with the same demo customer):

https://norrone-rewards-better-auth-tenant.vercel.app/api-demo?key=sk_yzh6YoGEV4jzP_cLlUrzdIs_2B0ctyeT&shop=md7721wqfvgqt85qhmfgfkqq41n8ecqgg&customer=cust-downtown-3

Or the plain page:

<https://norrone-rewards-better-auth-tenant.vercel.app/api-demo>

Same API key and shop/customer values as above. Try, in order:

1. "Fetch customer" – see their current points/tier
2. "Record event" – enter a deltaSpend (e.g. 50) and an action (e.g. PURCHASE), then submit;
this awards points and can trigger a tier upgrade if a threshold is crossed
3. "Fetch customer" again – confirm the points went up
4. "Personalized offers" – see what this specific customer qualifies for next
5. "Shop-wide offers" – the public, non-personalized version safe for a marketing page

6. WHAT TO ACTUALLY TEST =====

- Sign in at /login with the admin login above, browse the org dashboard, try adding a customer, adjusting their points manually, and changing the Wallet Pass design (logo/colors)
- Sign in at /admin/login with the same login to see the platform admin panel
- Use /wallet-demo to download an Apple pass and get a Google Wallet link for a demo customer
- Use /api-demo to record a purchase for a customer and watch their points/tier update
- Try the same flows on a phone to actually add a pass to Apple Wallet or Google Wallet

Please note anything that looks wrong, confusing, or broken – including exact error messages and which page/button you were on when it happened.
